## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1, 3, 4 and 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, lines 8-9, recites the limitation "the reduced contact clamping". There is insufficient antecedent basis for this limitation in the claim.

Claim 3, lines 3-4, recites the limitation "the presented component profile". There is insufficient antecedent basis for this limitation in the claim.

Claim 4, lines 3-4, recites the limitation "the mounting arrangement". There is insufficient antecedent basis for this limitation in the claim.

Claim 12, it is not clear what Applicant means by "more resilient clamping", line 4, and "more accurate machining", line 5. It is not clear what the resilient clamping and accurate machining is "more" than.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. No. 4,964,766 (Turchan et al., hereafter ‘766).

‘766 teaches three clamp pairs with clamping and seating pads on either side of the workpiece 2 (see figure 14, for example); push clamps 25, 26 opposite locating pins 22, 21, dampening device 23, 24, movable locating pin structure 27 with hydraulic cylinder 40 and rubber support pin 32 (see col. 5, line 42 through col. 7, line 23 and figures 2 and 14 for example); wedge lock clamp 6 (see figure 9A, for example) that clamps and dampens vibration along the z-axis (col. 3, lines 63-64, for example).

‘766 teaches a machining process, specifically a face mill 37.

Regarding claim 12, Examiner notes that a workpiece starts off in a “rough” condition before machining with an initial machining process for removal of bulk material. The removal of material is the process of machining. The machining process includes an initial rough machining process with the tool starting the machining operation and a final machining process where the details are machined. Furthermore, the machining process includes these steps when the workpiece is forwarded to another machining process where the workpiece is again in a rough initial state for rough machining then is machined to a final machining state. ‘766 specifically

teaches the clamping of the workpiece for accurate machining (see col. 7, lines 7-34, for example).

*Conclusion*
